

**FIRM LEVEL WEBSITE DISCLOSURE (ARTICLE 3 and 4 SFDR)
Sustainable Risk Finance Disclosure Regulation (2019/2088) (the Disclosure Regulation)**

Airbridge Equity Partners (**AEP**) makes the following disclosures in accordance with articles 3(1) and 4 (1) (b) of the Disclosure Regulation.

Sustainability risk policies

A sustainability risk means "an environmental, social or governance event or condition that, if it occurs, could cause an actual or potential material negative impact on the value of the investment". For AEP, sustainability risks are risks which, if they were to crystallise, would cause a material negative impact on the value of the portfolios of its alternative investment funds (**AIFs**).

The investment policy is primarily aimed at controlling sustainability risks that could have a negative impact on Fund assets and investments. When a sustainability risk is perceived, control measures can be taken, such as foregoing the investment in question or scaling down the investment in question.

The management of sustainability risks is also considered in the diversification of the investment portfolio. At present, no relevant sustainability risks have been identified that affect the investment portfolio of AEP. The advancement of sustainability is not an investment objective of Airbridge, and due to the size and nature of the investments, sustainability factors are in principle not considered in the implementation of the investment policy.

Principal Adverse Impact reporting

In accordance with article 4 sub 1 (b) of the Disclosure Regulation, AEP states that it does not consider adverse impacts of investment decisions on sustainability factors as set forth in article 4 sub 1 (a) of the Disclosure Regulation and therefore does not make the disclosures as described in article 4 sub 1 (a) of the Disclosure Regulation. Given the small size of the organisation, such disclosure as set forth in article 4 sub 1 (a) of the Disclosure Regulation and the administrative burden in connection therewith would not be proportional.

AEP will reassess the need to consider sustainability factors if there is a significant increase in the Fund assets, or if there are relevant changes to the investment policy, such as a switch to different industries or geographies that may pose significant changes to potential sustainability factors.
